SUMMARY

AI/ML Engineer specializing in LLM-powered agents, agentic systems, and full-stack AI deployment. Proven track record delivering production-grade pipelines - from fine-tuning, building Agent Harness, alignment to agentic security and robustness in AI Agents.

EDUCATION

Arizona State University, Tempe, AZ

Master's in Computer Science (AI/ML)

GPA: 3.78 | May 2026

Relevant Courses: Agentic AI, Robotics Learning, Natural Language Processing, Cloud Computing, AI/ML

Bachelor's in Computer Science (Minor: Game Development)

GPA: 3.69 | May 2025

Relevant Courses: Data Structures & Algorithms, Software Engineering, DBMS, Artificial Intelligence

EXPERIENCE

Software Developer, MSN School, Ira A. Fulton Schools of Engineering

Dec 2023 - May 2026

- Collaborated with Los Alamos National Laboratory to deliver high-fidelity VR simulation modules, improving immersive training accuracy by **30%** across real-world physical workflows.
- Designed interactive simulation systems with real-time feedback loops for complex physical task training in VR-based environments.
- Optimized C++ digital-twin simulation pipelines, reducing runtime latency by **15%** in real-time training environments.

Software Engineer, Laboratory for Energy and Power Solutions (LEAPS)

Jan 2023 - Oct 2023

- Built AR/VR microgrid training systems enabling real-time interactive visualization of power networks, deployed across **10+** institutions.

Software Lead, Shonto Solar Engineering Team, EPICS, ASU

Aug 2022 - Dec 2022

- Led a 6-member team building an IoT-based solar microgrid monitoring system for **500+** residents, integrating sensor data, cloud storage, and real-time alerting.

PROJECTS

WebSecArena - Security Benchmark for LLM Web Agents (BrowserGym, AgentLab, Python)

Aug 2025 - Present

- Designed adversarial web environments across 6 attack classes including prompt injection, phishing, and clickjacking; ran **2,160** experimental trials across 12 agent-model combinations (3 LLMs, 4 AI Agent Architectures).
- Built 3 distinct prompt injection attack vectors targeting different layers of agent perception: system-prompt mimicry, hidden HTML elements, and deceptive UI popups.
- Defined a 3-outcome evaluation framework (ASR, STS, DTR) to distinguish genuine robustness from overcaution; baseline agents failed at **60-100%** rates across all attack classes.

AutoResearch - Multi-Agent Research Pipeline (Python, OpenAI API, Pydantic)

Mar 2026

- Built a five-agent pipeline — Planner, Retriever, Summarizer, Critic, and Writer — that autonomously decomposes research questions, fetches sourced facts, identifies coverage gaps, and produces structured Markdown reports.
- All inter-agent communication uses validated Pydantic schemas with no shared mutable state; includes full run tracing, configurable models per agent, and CLI entry point. Cost per run: **\$0.01-\$0.03**.

MatchABLE - AI Workforce Matching Platform (Hugging Face Transformers, AWS, React, Node.js)

Spring 2025

- Built an NLP-driven resume parser using Transformers for semantic search and candidate-to-role matching, deployed on AWS with CI/CD and inference monitoring.
- Designed a role-fit scoring pipeline using cosine similarity on sentence embeddings; developed full-stack React/Next.js and Node.js system integrating ML inference APIs with real-time candidate ranking.

LEADERSHIP

Technical Officer & Treasurer, Google Developer Student Club, ASU

Jan 2022 - Present

Mentored **750+** students and led workshops on AI/ML, cloud, MLOps, and full-stack; organized hackathons & technical bootcamps.

Core Officer, PIERA (India Policy & Economy Research Club)

Mar 2025 - Present

Led research seminars and mentored **50+** students in geopolitics policy analysis on India's economic and technical development.

TECHNICAL SKILLS

Languages & Tools: Python, C++, Java, C#, JavaScript/TypeScript, Swift, SQL, PostgreSQL, Claude Code, Codex, Cursor

AI/ML: PyTorch, TensorFlow, Hugging Face, Scikit-learn, RAG Pipelines, MCP, AI Agents, LLM Finetuning, AI Safety,

Cloud/DevOps: Azure, AWS, Docker, Kubernetes, Kafka, CI/CD, Git, GitLab, Datadog, Linux/UNIX

Frameworks: Node.js, FastAPI, React, Django, Langchain/Langgraph, .NET Core, vLLMs, ollama
